REMOTE
COLLABORATION
### JUMPSTART IN 3 STEPS

Who we are?

We are an international group of Microsoft Cloud experts and Microsoft SharePoint technology 'veterans', who joined their forces under community initiative - Digital Dexterity Labs.

Our mission is to share the wealth of experience, best practices and solutions in the area of secure and user-centric collaboration to provide pragmatic help with the successful implementation of Digital Workplace and the change.

It is evident that building a practical contingency plan is on all business' agenda today. Our Digital Dexterity Labs team is dedicated to help users and their organizations to stay connected, effective and resilient in their remote daily activities using M365.

The
Challenge

Yesterday about 36% of people globally worked remotely at least one day a week.
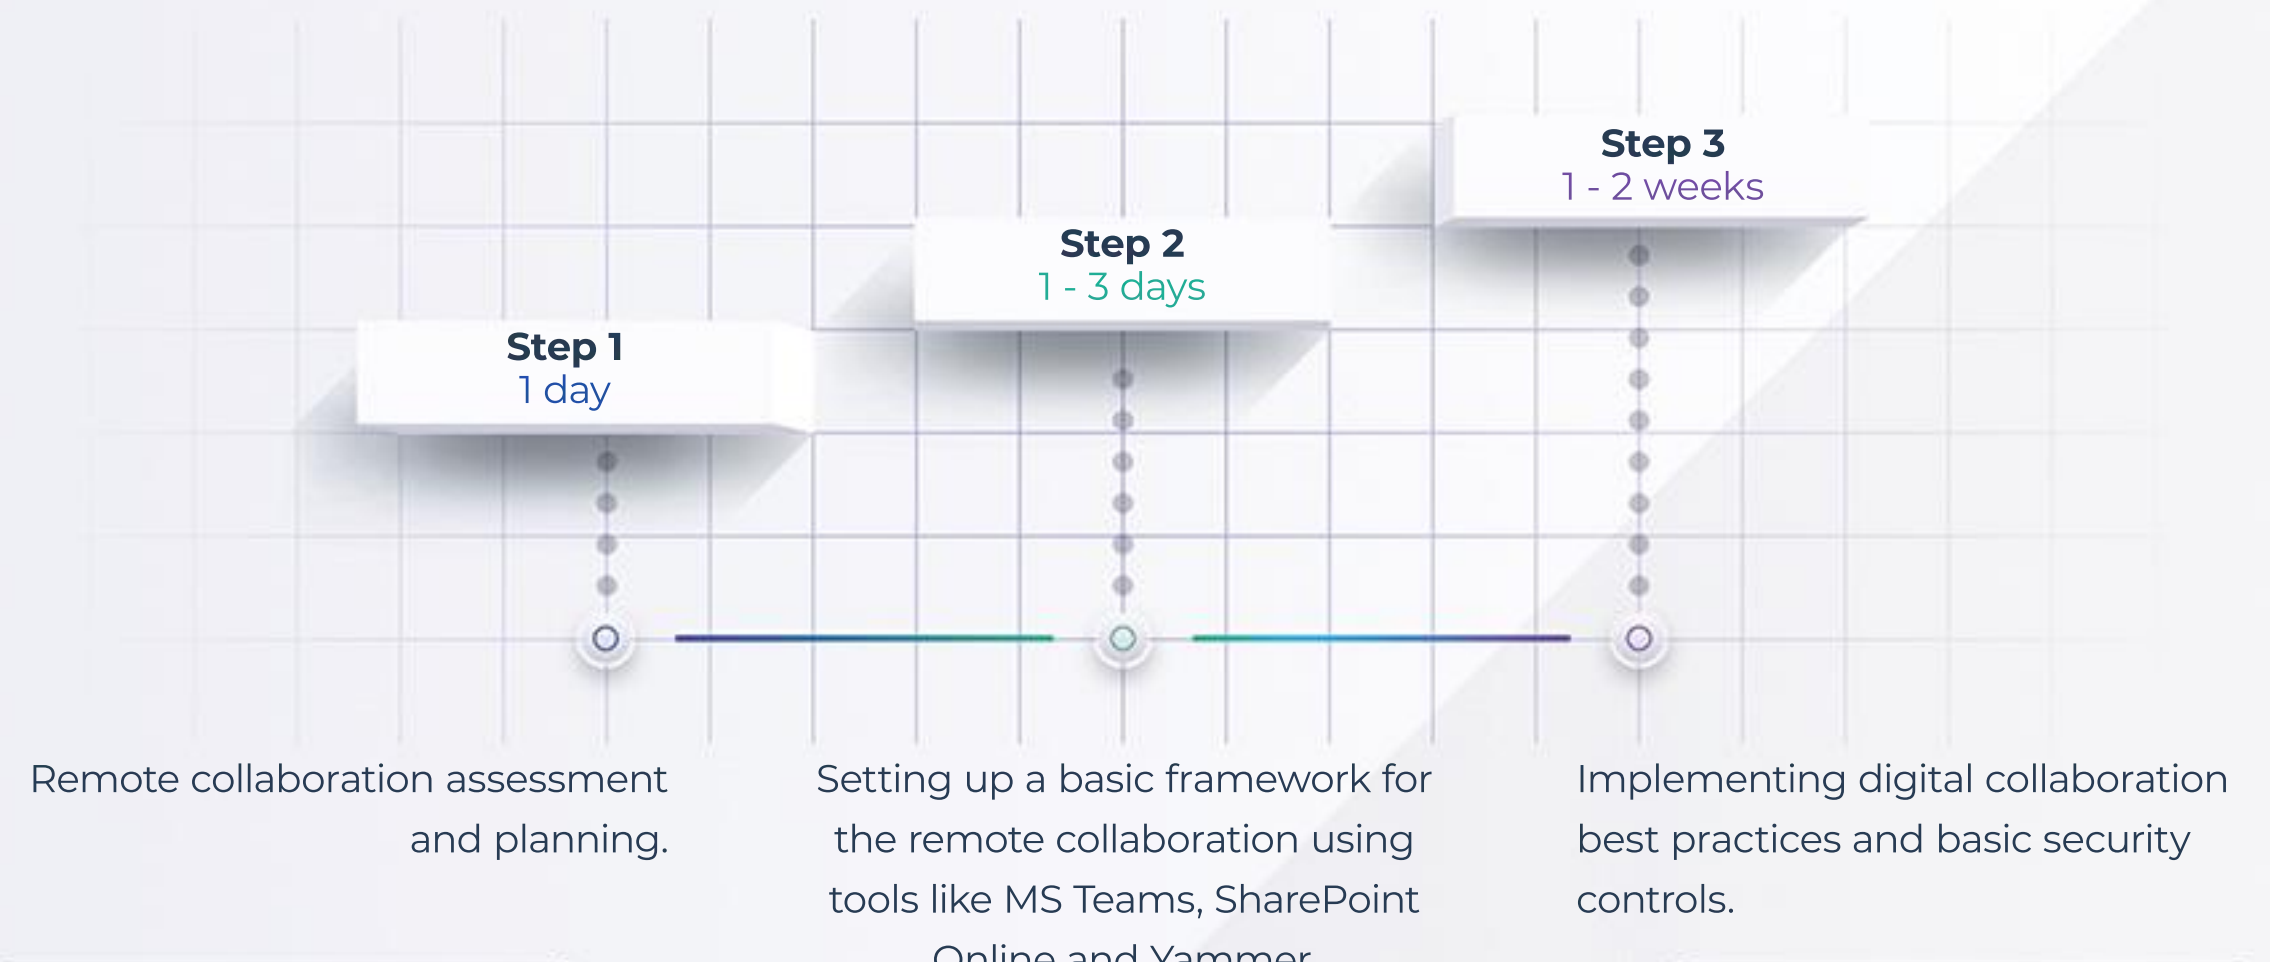

Today shifting to a remote work business model is no longer a company's cultural decision. It is a tough and rapid shift that business must accept 'overnight'. Now, companies are urgently trying to adapt so they can continue their success and for some – to continue at all...

Here are some of the key questions that businesses are struggling to answer today:

(?) How to enable remote collaboration and communication for everyone **quick**?

(?) How we can enable our information workers to use the M365 services in the **right context**?

(?) How to ensure that our end-users can **access all the content** they were using daily?

(?) How to face the rapid growth of demand and provide digital workplace and workspaces in **the scalable model**?

(?) How can we do all the above without compromising our **security and existing policies**?

The
Solution

Here at Digital Dexterity Labs, we can help you to address all these challenges with our Remote Collaboration JumpStart. We will help you to build your Digital Collaboration Workplace using industry best practices and ensure that employees can perform their remote work effectively and with confidence.

Step 1
1 day

Step 2
1 - 3 days

Step 3
1 - 2 weeks

Remote collaboration assessment and planning.

Setting up a basic framework for the remote collaboration using tools like MS Teams, SharePoint Online and Yammer.

Implementing digital collaboration best practices and basic security controls.

Our experts will guide you through the remote work 'art of possible' in M365 and advise on the most effective execution of the business user enablement, starting now.

Essential collaboration processes are turned on. This immediately enables the workforce to perform crucial business activities remotely.

The Collaboration Workplace has the organizational structure and operations 'built-in'. Workspaces are delivered in self-service with the lifecycle and business ownership attached, at the point of creation. All employees are fully empowered to collaborate independently with confidence.

What's
NEXT? (1 - 3+ months)

In order to achieve sustainable success of your Digital Workplace, the next phase should mainly focus on business-centric enhancements and **tailoring individual workspaces to division-specific needs**. Equally important is to ensure these individual business groups with their own **unique policy enforcement rules** and **the business ownership**, also **during the change**. This will also include auto-import and classification of all previously created workspaces during the JumpStart phase. All to fully **optimise your business outputs and operationalize your governance and the security framework** in the background.
